Lab Final Exam

» Required field

Freestyle project
This is the central feature of Jenkins. Jenkins will build your project, combining any SCM with any build system, and this can be even used for something other than software build.

Pipeline
Orchestrates long-running activities that can span multiple build agents. Suitable for building pipelines (formerly known as workflow and/or organizing complex activities that do not easily fit in free-style job type.

Folder
Creates a container that stores nested items in it. Useful for grouping things together. Unlike view, which is just a filter, a folder crea separate namespace, so you can have multiple things of the same name as long as they are in different folders.

OKtoibranh Pipeline
Creates a set of Pipeline projects according to detected branches in one SCM repository.
